

FUTURE LENS
PLAN 4: GenEd

OVERVIEW

GenEd is a generative AI that produces “**cinematic educational videos**” that leverage visual learning to address **specific gaps in understanding** or clarify a topic. It provides comprehensive video explanations of the subject or concept prompted by the student, immersing them in the scene while ensuring all content is factual.

Hi Name.
What do you want
to learn today?

I don't understand
how to find the
charge of an
unknown electrode
with zinc example

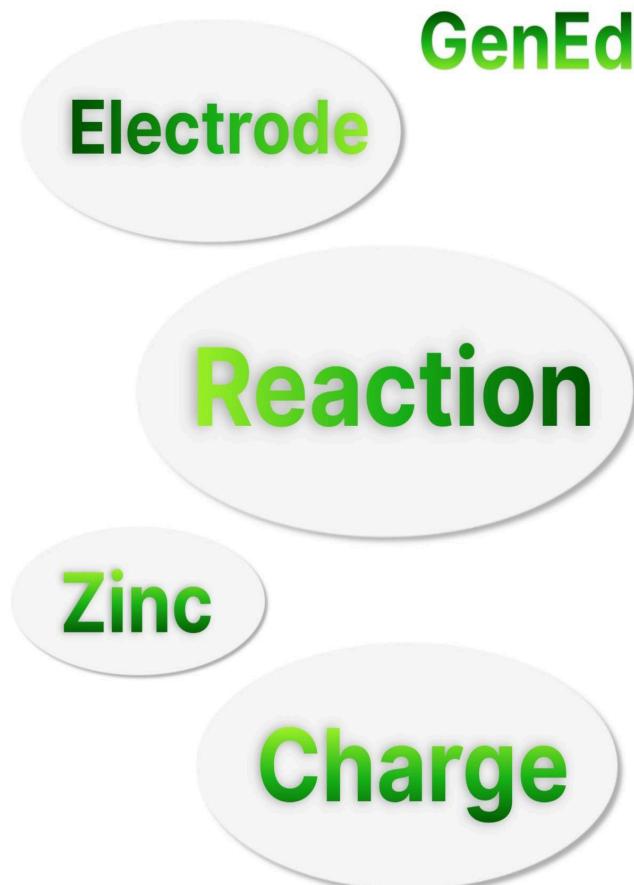

Suggestion

Suggestion

Suggestion

Suggestion

1	Prompt	S	You input a detailed explanation of your specific knowledge gap or topic for clarification using text or speech-to-text in the prompt field
2	Suggest	AI	AI provides real-time suggestions while you type a prompt (similar to Google's autocomplete), allowing you to quickly select a completed prompt or question from the suggestions
3	Generate	AI	AI renders a video or image that visualizes the concept, along with a voiceover explanation that supports understanding

CONCEPT APPLICATION

While the AI's generation process is still being developed and refined, the following concepts/steps will likely be involved:

- NLP / LLM
- Conceptual tags
- Diagnosis (of gap)
- Concept map
- Lesson planner
- Storyboard generator
- Fact-checking

GAP

The following are gaps in current educational generative AI:

- Lack of accuracy in content
- Limited cinematic or visual engagement
- Inability to generate longer, in-depth explanations
- Difficulty in identifying specific gaps in student knowledge
